

INFORMATION FOR MBL DISTRIBUTORS

MBL announces the availability of the USB MCMI Upgrade Kit for D/A converters.

The new technology developed by MBL and presented at this years High End Exhibition in Munich is a standard feature since this summer in all D/A converters from MBL.

The new interface USB MCMI (Master Clock Mode Interface) turns your digital music archive into a source of high end high fidelity. Finally you can play back high-resolution music formats that are stored on your hard drive without loss, genuinely and in brilliant quality – without having to go the long way around a CD. That way you can open one of a kind soundscapes of the famous MBL audio systems. Pure musical enjoyment from the hard drive – as if you were there live at the performance!

This interface is not only built in as a standard feature in new D/A converters but it is also now possible to upgrade older models with this new technology.

For a net price of € 420,- plus shipping costs you can receive the complete kit, which you can have installed by your own service shop and have your common MBL D/A converter upgraded. Of course we also offer to do the upgrade for you in our manufactory as a complete service at a total price of € 610,- (plus shipping costs) including all upgrade work and a complete system check. The time needed is about two days. Also included is a voucher for a free of charge installation of the latest full version of J. River Media Center Software, with which you cannot only import your music data, but you can also manage it and play it back very comfortably in a one of a kind quality. It is important that you contact us before shipping your equipment so that we can check by means of the serial number, whether or not your equipment can be upgraded or not. Please do contact us – our service team is looking forward to serve you!

unique high end audio

Features of the USB MCMI for D/A converters

- Play back of high-resolution music with 16 or 24 bit and sampling rates of up to 96 kHz
- Spectacular jitter count at an unaltered data flow (1:1 bit true)
- Easy to install with the USB interface without having to install drivers (Native Support)
- All you need is the common play back software on your computer
- Available for PC (Windows XP, Vista) and Mac
- Crystal oscillators for timing the output signal (Master Clock Mode, timing-accurate play back)
- Electrical isolation of computer and audio system, therefore no interference by the computer's switching power supply
- Standard with D/A converter mbl 1511 and mbl 1611
- Upgrade-kit for existing D/A converters
